DETAILED ACTION

1. This office action is responsive to the pre-amendment filed on 03/06/2004.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umehara et al (US Patent 6,774,849) in view of Takeuchi et al (US Patent 5,173,711).

Umehara et al disclose, in figure 17, an inverted-F antenna 1 fixed on a ground conductor surface 8h, a radiating conductor plate 1a disposed opposing and substantially in parallel with the ground conductor surface, a power-feeding conductor plate 1d extending substantially perpendicular from an outer edge of the radiating conductor plate, and a shorted conductor plate extending substantially perpendicular from an outer edge of the radiating conductor plate and connected to the ground conductor plate. The patent to Umehara et al differs from the claimed invention because it does not disclose a plurality of shorted conductor plates connected between the radiating conductor plate and the ground conductor plate. Takeuchi et al disclose, in figure 2, an antenna device comprising a plurality of radiating antennas, each antenna comprising a radiating radiator plate, a feed, a short circuiting conductor, and a plurality of shorting pins connected between the radiating plate and the ground plane 25. Since one of ordinary skill in the art would have recognized the benefits of providing

Art Unit: 2821

disclosed.

impedance matching, correction of phase, and obtaining of an excellent axial ratio, it would have been obvious to employ the antenna of Umehara et al with a plurality of shorting elements as taught by Takeuchi et al, see column 5, lines 11-31.

The patents to Iwai et al, Saitoh, Liebendoerfer et al, Stoiljkovic et al, Sanad, Eggleston et al, and Segerstedt are cited as of interest showing the antenna similar to that

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (571) 272-1822.

The examiner can normally be reached on M-F (8:00AM - 5:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on (571) 272-1834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
